

EMF Readings

New Style 2007 TheraSauna®

What is EMF?

“The energy that radiates from all things in nature and from man-made electronic systems. It includes cosmic rays, gamma rays, x-rays, ultraviolet light, visible light, infrared light, radar, microwaves, TV, radio, cell phones and all electronic transmission systems. Electromagnetic radiation is made up of electric and magnetic fields that move at right angles to each other at the speed of light. See [spectrum](#).”

QCA Spas purchased a Gauss Meter to measure the EMF in the TheraSauna®. As you can see by the chart above, the area of concern is a reading greater than 10. The TheraSauna's® TheraMitters™ were tested at various angles and distances. Sample readings were taken outside the sauna, inside the sauna, in a close proximity to the TheraMitters™ as well as at a distance. The TheraSauna® was measured when it was off, when it was on, while it was warming up, and once it reached temperature. QCA Spas is pleased to announce that the TheraSauna® passed the EMF testing with flying colors. A TV, Computer, Fluorescent Light or Cell Phone gives off considerably more EMF than the TheraSauna®.
